Getting Started:

To Run TwitterDemon.py in your Windows PC, firstly you need to install the latest version of Python (Python 3.9).

You can Download it from this link : https://www.python.org/downloads/

After the download is completed install Python to your PC.

Then you need to Install Tweepy Package which we sent to you with the TwitterDemon file.

Unzip/Unrar the Tweepy folder and move it to your Desktop.

To Install Tweepy Package Follow these steps:

1. Click windows icon down-left corner of your PC, and to the search bar type "cmd" and click to the first result.

2. To the opened Terminal type "cd Desktop" press Enter then type "cd tweepy" press Enter Again.

3. To the terminal type this "python setup.py install" and press Enter.
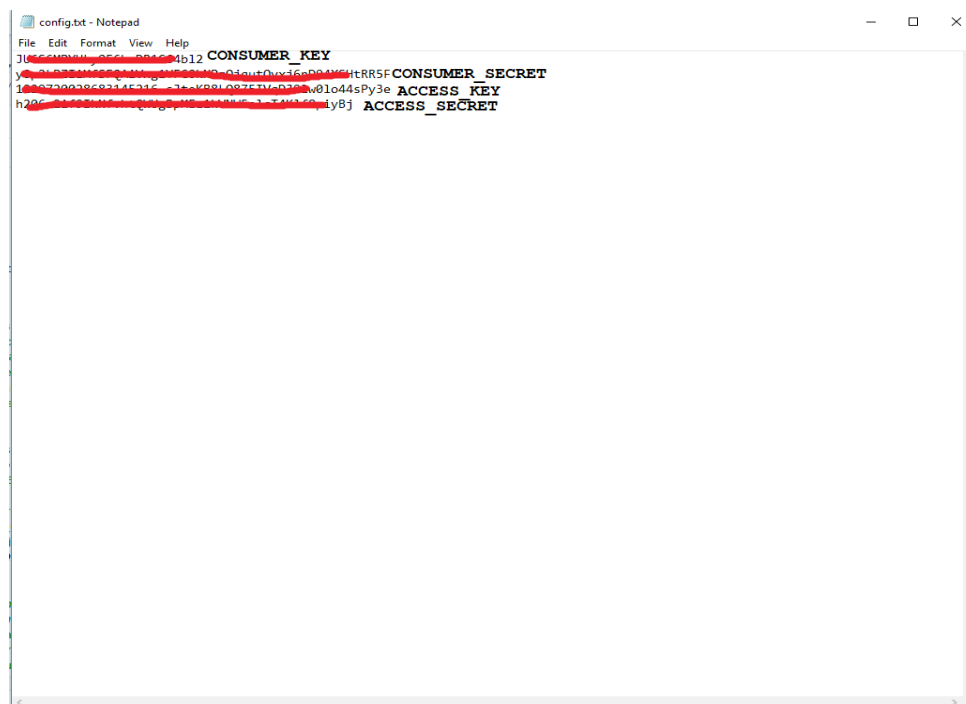

4. Setup will be completed in less than 1 minute.

Move TwitterDemon file to the Desktop. (if it is rar or zipped unrar/ unzip it).

Then open your cmd again as in <<STEP 1>>.

5. Type "cd Desktop" and press Enter, then type "cd TwitterDemon" press
Enter.

6. To Run it type "python TwitterDemon.py"
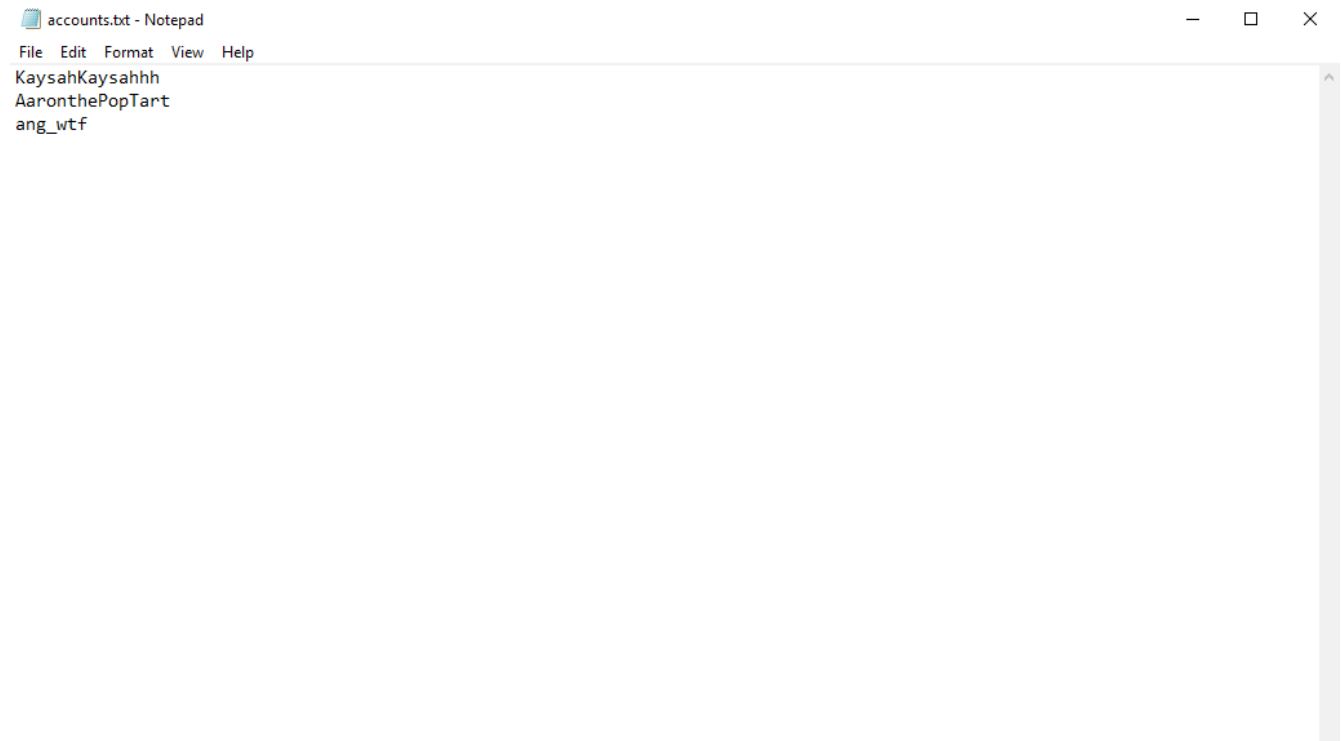

config.txt :

In this File Pass your Consumer Key, Consumer Secret, Access Key, Access
Secret in the order as it shown in picture.

To see how you get these keys please check this link : [in step 7: Access setting please select "Read, Write and Access Direct Messages"]

https://docs.inboundnow.com/guide/create-twitter-application/

accounts.txt :

This file contains the account names which will be used in MODE 1

ATTENTION! DO NOT PASS THE ACCOUNTS' LINKS PLEASE PASS ONLY THE USERNAMES AS SHOWN IN THE PICTURE!

Message.txt :

In this file please pass your message which will be sent to the users.

USING TWITTER DEMON :

Twitter Demon Has Two Modes!

MODE 1 is scanning Rts in accounts which you give from the file.

MODE 2 is finding top trending tweets according to the keyword you give.

In this Picture you see MODE 1 Activated.

After Message is sent, programm is waiting for 5 minutes.

If any error occurs (ex. User Did Not Accept Dms from Non-Followers) you will

see the message about that and programm will try to send DM to the next

User.

```
     ###########        ###
          ##            ##  ##
          ##            ##     ##
          ##            ##     ##
          ##            ##  ##
          ##            ###

######################### BEFORE WE START PLEASE GIVE ME SOME DETAILS ####################

Please SELECT the Mode of Program :
 1. Scan for RT from accounts
2. Get top trending Tweets
Please Type 1 or 2 : 2
Initializing the connection...
*** TwitterDemon is Starting ***
MODE 2 is activated!

Please give a keyword : Smartphone
Please Declare Top N tweets, N = ? : 10
How many likes must have a tweet (min) to send a DM to user ? : 100
